

PERSONAL PORTFOLIO WEBSITE

PROJECT REPORT -1

NAME:LOKKU SIREESHA

COLLEGE: NBKR Institute Of Science and Technology

COURSE:B.TECH -CSE

YEAR:2024-2028

1. PROJECT INTRODUCTION

The Personal Portfolio Website is a web-based project developed to showcase my personal information, education, technical skills, projects, achievements, and contact details. The main goal is to create a simple, attractive, and professional online profile.

2. PROBLEM DESCRIPTION

It can be difficult to present personal skills, projects, and achievements in one place. This project solves the problem by providing a single website where all important professional information can be easily viewed.

3. REQUIREMENTS

The website requires a computer or laptop, a code editor such as Visual Studio Code, and a modern web browser. The main website requirements include Home, About, Skills, Education, Projects, and Contact sections.

4. TECHNOLOGIES USED

The website is developed using **HTML, CSS, and JavaScript**. HTML creates the structure, CSS provides styling and layout, and JavaScript adds interactive functionality.

5. ARCHITECTURE

The website follows a simple front-end structure. The main flow is:

Header → Home → About → Education → Skills → Projects → Contact → Footer

Users can navigate between different sections using the navigation menu.

6. DATABASE DESIGN

This portfolio is mainly a static website, so a database is not required. Personal information and project details are stored directly in the website files. A database can be added in the future for storing contact form submissions.

7. UI/UX DESIGN

The website uses a simple and user-friendly design. Proper spacing, readable fonts, images, navigation links, buttons, and responsive layouts are used to provide a better user experience.

8. DEVELOPMENT PROCESS

First, the website structure was planned. Then HTML was used to create the content, CSS was used for styling, and JavaScript was used for interactive features. Finally, the website was tested and improved.

9. FEATURES

The main features include:

- * Home section
- * About Me
- * Education
- * Technical Skills
- * Projects
- * Achievements
- * Contact section
- * Navigation menu
- * Images
- * Responsive design

10. TESTING

The website was tested for navigation, layout, images, buttons, links, and responsiveness. It was also checked on different screen sizes and web browsers to identify and fix errors.

11. CHALLENGES FACED

During development, some challenges were faced with image positioning, navigation spacing, text alignment, background images, responsive layout, and CSS styling.

12. SOLUTIONS

The problems were solved by using CSS properties such as **Flexbox**, margin, padding, gap, position, and media queries. Regular testing and debugging were also performed to improve the website.

13. FUTURE ENHANCEMENTS

In the future, the website can be improved by adding a **dark mode**, animations, backend contact form, database, blog section, resume download, social media links, and additional projects.

14. CONCLUSION

The Personal Portfolio Website helped me gain practical knowledge of HTML, CSS, and JavaScript. It also improved my understanding of web design, responsive layouts, UI/UX, debugging, and website development.
